

About Me

I'm Amarachukwu Eze

a Data & AI Leader, Executive Director at DataHER Africa, Speaker and Author advancing leadership and creating more inclusive pathways in Data & AI.

My journey into technology started with a background in Electronic Engineering, but over the years, I found myself drawn more and more to the power of data, not just as numbers and dashboards, but as a tool for understanding people, solving problems and making better decisions.

Today, my work sits at the intersection of **Data, AI, leadership and community building**.

I've spent the last several years building experience across data engineering, analytics, business intelligence and AI, working with data to solve real-world problems and help organisations make sense of information. Along the way, I've also become increasingly interested in the people behind the technology, who gets access to opportunities, who gets to lead, and what we can do to create a more inclusive technology ecosystem.

That has become a big part of the work I do today.

Beyond the Job Title

I believe that technology is most powerful when it creates opportunities for people.

This belief led me to found **DataHER Africa**, a community focused on supporting African women in Data & AI through mentorship, community and opportunities for growth. Building DataHER has been one of the most meaningful parts of my journey because it allows me to contribute beyond my individual career and help create pathways for other women coming behind me.

Through DataHER Africa and my wider mentorship work, I've had the opportunity to support women at different stages of their careers, from those taking their first steps into technology to professionals looking to grow, lead and navigate their careers with more confidence.

For me, leadership isn't just about the position you hold. It is also about what you make possible for other people.

What I Do

My work spans several areas, but they all connect to one thing: **using knowledge, technology and community to create meaningful impact.**

Data & AI Leadership

I work across Data and AI, bringing together technical understanding, business thinking and a strong interest in how technology can create better outcomes.

Community Building

As the Founder and Executive Director of DataHER Africa, I'm building spaces where women can learn, connect, find mentors and see themselves as leaders in Data & AI.

Speaking & Thought Leadership

I speak about Data, AI, leadership, career growth, inclusive innovation and the future of work. I enjoy taking complex ideas and making them practical, relatable and useful.

Mentorship

Mentorship has been a consistent part of my journey. I believe that sometimes, having someone who has walked a little further ahead of you can make all the difference.

Writing & Knowledge Sharing

I'm also an author and enjoy sharing the lessons, experiences and perspectives I've gathered throughout my career.

Let's Connect

If you're interested in Data, AI, leadership, inclusive innovation or simply building something meaningful, I'd love to hear from you.

Impact & Recognition

Hero

Impact & Recognition

My work sits at the intersection of Data, AI, leadership and community. Over the years, I've had the opportunity to build, mentor, speak, create and contribute — and I'm grateful that some of that work has been recognised along the way.

01 — Building Opportunities Through DataHER Africa

Founder & Executive Director, DataHER Africa

I founded DataHER Africa to create more pathways for African women to grow, connect and lead in Data & AI.

What started as an idea has grown into a community built around mentorship, learning, connection and opportunity. Through structured mentorship programmes, community initiatives, events and partnerships, DataHER Africa continues to create spaces where women can develop their skills, build confidence and see themselves as part of the future of Data & AI.

Impact highlights

- **50+ women mentored**
- **100+ community members**
- Mentorship programmes and community initiatives
- Data & AI-focused events and learning opportunities
- Partnerships supporting women in technology

[Explore DataHER Africa →]

Recognition

Then I'd make this visually distinct.

02 — Recognition

I'm grateful to have received recognition for my contribution to Data, technology and the wider community.

Crest Africa Women in Data Award

Winner — 2025

A recognition of my contribution and impact in the Data space.

<https://crestafrica.com/crest-awards-2025-winners/>

TechWomen100 Awards

Winner — 2026

Recognised among the women making an impact across technology

<https://wearetechwomen.com/tw100-women-in-tech-awards/techwomen100-awards-winners-2026/>

35 Under 35

Shortlisted — 2025

She Inspires Awards

Finalist, Rising Star of the Year — 2026

For me, impact isn't only about recognition.

It's about the people who gain an opportunity, the problem that gets solved, the knowledge that gets shared and the person who becomes confident enough to take the next step.

That's the kind of impact I want my work to create.

Speaking & Features

Big Data LDN 2026

Speaker

The Hidden Data Goldmine: Turning Workforce Data into Strategic Business Insights

A practical look at how organisations can move beyond using workforce data for reporting and start using it to uncover patterns, answer strategic questions and make better business decisions.

London · September 2026

Other Media & Community Features

Podcasts, interviews, articles and community spotlights highlighting my work across Data, AI, leadership and inclusion.

What I Speak About

Data & AI Leadership

What it takes to grow from a technical practitioner into a leader and create meaningful impact through technology.

Data & AI in the Workplace

How organisations can turn data into actionable insights and use AI thoughtfully to improve the way we work.

Women in Data & Technology

Creating more inclusive pathways for women to enter, grow and lead in technology.

Leadership & Career Growth

Visibility, intentional career growth, building credibility and navigating the different stages of a technology career.

Inclusive Innovation

Why the future of technology needs diverse voices at the table and what we can do to make that future more inclusive.

Building Communities in Tech

Lessons from building DataHER Africa and creating spaces where people can learn, connect and grow.
